

A CPU miner with multi algo support and optimized for CPUs
with AVX512, SHA and VAES extensions by JayDDee.

Usage: cpuminer [OPTIONS]

Options:

-a, --algo=ALGO specify the algorithm to use

allium Garlicoin (GRLC)
anime Animecoin (ANI)
argon2 Argon2 Coin (AR2)
argon2d250
argon2d500 argon2d-dyn, Dynamic (DYN)
argon2d4096 argon2d-uis, Unitus (UIS)

-N, --param-n=N N parameter for scrypt based algos
-R, --param-r=N R parameter for scrypt based algos
-K, --param-key=STRING Key (pers) parameter for algos that use it
-o, --url=URL URL of mining server
-O, --userpass=U:P username:password pair for mining server
-u, --user=USERNAME username for mining server
-p, --pass=PASSWORD password for mining server
--cert=FILE certificate for mining server using SSL

-x, --proxy=[PROTOCOL://]HOST[:PORT] connect through a proxy
-t, --threads=N number of miner threads (default: number of processors)
-r, --retries=N number of times to retry if a network call fails
(default: retry indefinitely) --
retry-pause=N time to pause between retries, in seconds (default: 30)
--time-limit=N maximum time [s] to mine before exiting the program.

-T, --timeout=N timeout for long poll and stratum (default: 300 seconds)
-s, --scantime=N upper bound on time spent scanning current work when
long polling is unavailable, in seconds (default: 5)
--randomize randomize scan range (deprecated)

-f, --diff-factor=N divide req. difficulty by this factor (std is 1.0)
-m, --diff-multiplier=N Multiply difficulty by this factor (std is 1.0)
--hash-meter display thread hash rates
--coinbase-addr=ADDR payout address for solo mining
--coinbase-sig=TEXT data to insert in the coinbase when possible
--no-longpoll disable long polling support
--no-getwork disable getwork support
--no-gbt disable getblocktemplate support
--no-stratum disable X-Stratum support
--no-extranonce disable Stratum extranonce subscribe
--no-redirect ignore requests to change the URL of the mining server

-q, --quiet reduce log verbosity
--no-color disable colored output

-D, --debug enable debug output
-P, --protocol-dump verbose dump of protocol-level activities
-B, --background run the miner in the background
--benchmark run in offline benchmark mode
--cpu-affinity set process affinity to cpu core(s), mask 0x3 for cores 0 and 1
--cpu-priority set process priority (default: 0 idle, 2 normal to 5 highest) (deprecated)

-b, --api-bind=address[:port] IP address for the miner API, default port is 4048)
--api-remote allow remote control
--max-temp=N only mine if cpu temp is less than specified value (linux)
--max-rate=N[KMG] only mine if net hashrate is less than specified value
--max-diff=N only mine if net difficulty is less than specified value

-c, --config=FILE load a JSON-format configuration file
--data-file=FILE path and name of data file
--verify enable additional time consuming start up tests
--stratum-keepalive prevent disconnects when difficulty is too high

-V, --version display version and CPU information and exit
-h, --help display this help text and exit
